

### What to expect after laser therapy?

Soon after the procedure, you may feel a slight bump on the skin; it should disappear hours after treatment. The area may also appear slightly redder and occasionally may be bruised.

### Are there any precautions after laser therapy?

After laser therapy, it is strongly recommended that one keep away from the sun. Healing can be facilitated by wearing support hose. The pain is minimal and one may take any over the counter pain medications. After treatment, there is no downtime. You can resume all of your normal activities immediately afterward.

### When can you go back to work after laser therapy?

Patients are encouraged to resume all normal activities immediately. Final results may not be apparent for several months. Most patients are satisfied by the results in a very short time.

### How long does it take for the results to become evident?

The results of laser treatment for spider veins are not immediate. After the laser therapy, the vessels underneath the skin will gradually change from a dark blue to light red color, then eventually disappearing in two to six weeks.

Most patients report a high degree of satisfaction with the procedure and relief at no longer having to hide unsightly veins. The treated areas are noticeably clearer and in most cases the skin continues to improve with each successive treatment.

The majority of spider veins will disappear within two to four weeks, and in some cases even longer.
